Biopsy Device

The Mammotome Expert Biopsy Suite

Integrating stereotactic biopsy with specimen radiograph at the point of care can be very efficient, but it doesn't have to be complicated. Mammotome's Expert Biopsy Suite facilitates the entire breast cancer diagnostic pathway from biopsy to lesion identification to pathology.

The **Mammotome Expert Biopsy Suite** is designed to meet your facility and patient needs:

FLEXIBLE INTEGRATION

Biopsy device, specimen radiograph and biopsy markers work together with most Stereotactic Imaging systems (2D and 3D). Modular suite components can be easily serviced or upgraded.

OPTIMIZED WORKFLOW

Collect tissue quickly and analyze samples immediately to help streamline the biopsy process. Then, confidently mark the biopsy site to meet your patient's follow-up needs.

EASY TO INTERPRET RESULTS

High-quality tissue samples are automatically collected and instantly arrayed for quick confirmatory radiograph. This helps ensure an accurate, comprehensive analysis by pathology.
